Sr.No.	Topic
1	Chap. 1 – Planning in sports – Learn & revise Do exercise 1: from question 1 to 40 from book DR. VK Sharma Saraswati Publication
Subject - Computer	
Sr. No.	Topic
1	<p>Revision Tour of Python</p> <ol style="list-style-type: none"> i. Write a Python program to calculate the length of a string. ii. Write a Python program to count the number of characters (character frequency) in a string. Sample String: 'google.com' Expected Result: {'g': 2, 'o': 3, 'l': 1, 'e': 1, '.': 1, 'c': 1, 'm': 1} iii. Write a Python program to get a string from a given string where all occurrences of its first char have been changed to '\$', except the first char itself. Sample String: 'restart' Expected Result: 'resta\$t' iv. Write a Python program to remove the nth index character from a nonempty string. v. Write a Python program that accepts a comma separated sequence of words as input and prints the unique words in sorted form (alphanumerically). Sample Words: red, white, black, red, green, black Expected Result: black, green, red, white, red vi. Write a Python function to get a string made of its first three characters of a specified string. If the length of the string is less than 3, then return the original string. Sample function and result: first_three('ipy') -> ipy first_three('python') -> pyt vii. Write a Python program to check whether a string starts with specified characters. Note: In cryptography, a Caesar cipher, also known as Caesar's cipher, the shift cipher, Caesar's code or Caesar shift, is one of the simplest and most widely known encryption techniques. It is a type of substitution cipher in which each letter in the plaintext is replaced by a letter some fixed number of positions down the alphabet. For example, with a left shift of 3, D would be replaced by A, E would become B, and so on. The method is named after Julius Caesar, who used it in his private correspondence. viii. Write a Python program to print the following floating numbers with no decimal places. ix. Write a Python program to print the index of the character in a string. Sample string: Python Program Expected output: Current character P position at 0 Current character y position at 1 Current character t position at 2 x. Write a Python program to count and display the vowels of a given text. xi. Write a Python program to sum all the items in a list. xii. Write a Python program to get the largest number from a list. xiii. Write a Python program to remove duplicates from a list. a = [10,20,30,20,10,50,60,40,80,50,40] xiv. Write a Python function that takes two lists and returns True if they have at least one common member. xv. Write a Python program to shuffle and print a specified list.
